Hello Daniel Huff,

I am writing to apply for the Cyber Security Engineer position with McAfee. The experience I possess is as a digital security professional with three years of experience in the field and pursuing a degree in Computer Science and Digital Media and Communications as a double major. In my current role as an Information Technology Administrator for Livingston Hearing Aid Center, I analyze data and documents for inconsistencies that may indicate various types of fraud. Also, I manage an entire enterprise of computer systems for the company. This goes from the buying, managing and upkeep of printers, computers, smart devices and more for over 600 endpoints.

My analytical skills are sharp and I am able to solve complex problems. With high profile data breaches making the news lately, it is vital that companies can provide safety guarantees to customers. I take pride in knowing I can help plan and maintain those various security settings, both internally and externally. There are many people within my company who believe I'm often the go-to person on staff for assistance with repairing glitches and understanding errors. Building a strong, focused, and dedicated team has helped me develop a successful career, thus far. I believe in professional development, leading by example, and that you are only as strong as your weakest link. I hope to help develop your existing team and be a positive role model for security compliance and identifying potential threats.

I am quite certain you will find my expertise and talents to be what you are looking for in a Cyber Security Engineer. Please be in touch at your convenience to schedule an interview. I look forward to meeting you and thank you in advance for your time and consideration.

Sincerely,  
Garrett Kidd
